4. Chapter: Week 1 Social Psych

1. Week 1 Social Psych Questions

4.1.1. In order to test a hypothesis that the presence of others inhibits ...

Author: Yacoub Jayoghli

In order to test a hypothesis that the presence of others inhibits a person from intervening in an emergency situation, a fake smoke was introduced in a room where one or more unsuspecting experimental participants thought they were involved in a different experiment. The results showed that people were less likely to report the smoke when they were with others than when they were alone.

Please choose only one answer:

- The results were consistent with the hypothesis; but the hypothesis needs to be tested in other emergency situations as well.
- The results are consistent with the hypothesis; but there is an alternative explanation of the results.
- Both A and B
- Neither A nor B

Author: Yacoub Jayoghli

According to the textbook, bystander intervention is a result of a decision making process involving five steps. Which of the following is false?

Please choose only one answer:

- Becoming aware of someone's need for help is an important step in this decision-making process
- If a bystander does not experience arousal, he/she will not help
- Working out the rewards is an important factor, but working out the cost is not.
- This model can explain why bystanders often fail to provide help.

Author: Yacoub Jayoghli

Heider (1958) argued that people are like naive scientists who try to make sense of an observable behaviour by inferring its cause. Beliefs about what caused a behaviour are called attributions. Internal attributions are:

Please choose only one answer:

- Discretionary attributes.
- Situational attributes
- Beliefs that something inside the person who performed the behaviour has caused the behaviour.
- Beliefs that something inherent in the situation where the behaviour has caused the behaviour

4.1.12. Which of the following is FALSE about Kelley's covariation theory o...

Author: Yacoub Jayoghli

Which of the following is FALSE about Kelley's covariation theory of attribution?

Please choose only one answer:

- The covariation principle states that, "an effect is attributed to a condition that is present when the effect is present, and absent when the effect is absent".
- Distinctiveness indicates the extent to which others in the same situation behave in the same way.
- Consistency indicates the extent to which the person usually behaves in the way he/she is currently behaving
- Low consensus, high consistency, and low distinctiveness results in dispositional attribution.

4.1.13. Gilbert, Pelham and Krull (1988) asked people to watch a videotape ...

Author: Yacoub Jayoghli

Gilbert, Pelham and Krull (1988) asked people to watch a videotape of a woman speaking about something anxiously. Although they could not hear what the woman was talking about, they were told that the topic of her speech was either anxiety-provoking or fairly neutral. Half of the participants just watched the video, but the other half did so while remembering a list of topics (high cognitive load). Which of the following is FALSE about this study?

Please choose only one answer:

- People under high cognitive load rated the women as anxious (i.e. dispositional attribution) regardless of the purported topic of her speech.
- People without cognitive load rated the women as anxious only when she was said to be talking about a neutral topic.
- Their finding supported the idea that a dispositional attribution is automatic.
- Their finding supported the idea that a corrected process is automatic.

4.1.16. Impression cycles refer to:

Author: Yacoub Jayoghli

Impression cycles refer to:

Please choose only one answer:

- Peoples' tendency to make circular arguments about their impression about others.
- Peoples' circle of friends within which they share impressions about other people.
- The cycles in which peoples' impressions change over time
- The process by which a target person's behaviour can give rise to an observer's impression about the target person, which can then influence the target person's behaviour, and so on, so tat it can form a self-perpetuating loop.
